The Deluxe Real Logs comprised of oak logs responsibly sourced in the UK are arranged upon a bed of bark and twigs which encapsulate the authentic fireplace setting. Each Deluxe Real Log fuelbed is individually unique. Created by hand using real logs, we can offer an unmatched, realistic, fuel-bed effect. The Logs are fixed into place upon a bed of bark, twigs, and log remnants to complete a natural setting. What better way to demonstrate a burning fire than by using real logs? The natural detail of the logs create an authentic look and feel which enhances the overall interaction between flame and fuel bed.
